GET MORE OUT OF EVERY LAST DROP.

Diesel oil is expensive. And for every rise in its price, the more profitable it becomes to reduce fuel consumption. At Volvo Trucks, our aim is to offer our customers the most fuel-efficient trucks on the market. However, that's not enough for us. We've also developed an entire package of measures to help you reduce your fuel bills still further. Driver training

in economical driving, transport information systems, tyre pressure monitoring, air deflector panels and aerodynamic wheel covers can all help reduce fuel consumption by between five and ten percent. A major saving, for you and the environment alike.

Now that's what we call environmental efficiency.

VOLVO TRUCKS. DRIVING PROGRESS
